## DANCE CENTER

*Reused hardware for a small interior design project.*

**About** - In this project, a storage space in the ground floor of a Parisian building is converted into a dance center. This is an opportunity for the architect to experiment reuse practice in their design for the first time.

**Challenges** - Finding the right way to provide a small scale project with reused hardware. Setting proper goals for a first experience. Meeting the needs of a public programme (ERP).

**Materials involved** - Lights and doors handles.

**Paris - FR - 2021 - Private procurement**
