ELAN BÂTISSEUR

Interacting with a demolition contractor to reclaim building elements

About - This operation explored how to step in a building site stripping to reclaim construction elements : by subcontracting with the demolition company, with a free site access to dismantle specific batches, or by organizing the collect of building elements dropped by the contractor. Each procedure led to different ways of reuse : donation, sales and internal reuse.

Challenges - Organizing the access to the materials without being formally involved.

Materials involved - partition walls (glazed and solid ones), doors, suspended ceilings, lights, tilt and turn windows, sanitarries, steel radiators, furniture.

Rennes - FR - 2021 - Private procurement

Project size : >3000 sqm - FCRBE partner : [Rotor asbl](#) - Project Owner : [Neotoa](#) - Deconstruction contractor : [Elan Bâtitseur](#) - Conception : [10i2la](#) - Other actors : demolition contractor.
